

Soft Tissue Complications – How to avoid and how to treat?

ZI Live Webcast

Program Description:

It is important to know the science of regenerative dentistry both for soft and hard tissue before anyone attempts to provide this treatment to their patients. There will be scenarios where soft tissue complications will occur when placing implants or when providing restorative treatment. In this lecture, Dr Fischer will discuss about how and when soft tissue complications may occur. He will also share his knowledge on how to avoid such occurrence when placing implants and if it happens, how to treat them.

Program Objectives:

At the completion of the program, participants should be able to:

- Understand the clinical scenarios and types of soft tissue complications
- Describe the criteria of cases and treatment modality to avoid such complications
- Discuss on methods to treat these cases when they occur

Dr Kai Fischer, DDS

Dr. Fischer graduated with a DDS in 2009 and subsequently obtained a postgraduate in periodontics from the German Society for Periodontology at the Julius-Maximilians University of Wuezburg in 2012. He proceeded to venture into research and teaching at UCL Eastman Dental Clinic in London from 2013-2014 before being a senior clinical lecturer at the Department of Periodontology in University Witten/Herdecke Germany until 2017. He is currently a fulltime private practitioner specializing in periodontics as well as dental implants and is an external senior clinical lecturer at University of Zurich. Dr Fischer is a well published author of various peer reviewed articles focusing on periodontology and regeneration of soft and hard tissue.
